Software Engineer · Full-Stack Product Engineer · React, React Native, TypeScript, Node.js

SUMMARY

Product-minded software engineer with 5+ years of experience building scalable web and mobile applications, real-time dashboards, and production-grade apps. Experienced in integrating AI capabilities into production developer workflows, including AI-assisted feature development, constrained code-generation experiences, and reusable platform components.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, SQL, HTML5, CSS3
Frontend: React, React Native, Expo, Zustand, TanStack Query, Tailwind CSS, NativeWind, Component & Design Systems
Backend, Data, & AI: Node.js, Express.js, PostgreSQL, MongoDB, REST APIs, GraphQL, WebSockets, Supabase, Webhooks, Row-Level Security, AI-Assisted Development
Testing & Operations: Jest, Maestro, EAS, Sentry, PostHog, RevenueCat, AWS, Git, Linux, CI/CD, Agile/Scrum

PROFESSIONAL EXPERIENCE

Founder & Lead Software Engineer | NoBull Solutions LLC - Obsessed, iOS **Apr 2026 – Present**

- Launched Obsessed on the App Store, an accountability-focused fitness app built end to end with React Native, Expo and TypeScript on a custom component library and a documented design system.
- Made the accountability rules impossible to bypass from the client by enforcing them in the database: a Supabase backend on PostgreSQL and Deno Edge Functions with row-level security and secure database functions.
- Settled every user's day correctly at their local midnight with a server-side grading engine on scheduled jobs and atomic transactions, guarded by client/server parity tests that fail CI on drift.
- Kept the core engines (progression, nutrition grading, accountability, routine import, subscriptions) shippable at every pull request, with Jest suites and GitHub Actions gating lint, typecheck and tests.
- Took payments live with RevenueCat webhooks, PostHog and Sentry, shipped staged over-the-air releases, and fixed a launch-blocking subscription fault within three days of it surfacing.

Frontend Engineer | Chess Solutions, LLC (Startup) **Feb 2023 – Mar 2026**

- Delivered a real-time React dashboard for high-frequency polygraph data streams that stayed responsive under sustained load, by batching and normalizing WebSocket events before render and cutting re-renders with memoization and selective state subscriptions.
- Gave the dashboard clean, consistent data to draw from by writing the Python integrations that transformed and validated incoming backend data into the structures the React components consumed.
- Sped up feature delivery and removed duplicated frontend logic with a reusable, component-based UI architecture.
- Shipped what customers actually asked for by running live demonstrations and feedback cycles with stakeholders and turning their requirements into production features.

Software Engineer Intern | Tier 1 Consulting Group **Jun 2022 – Aug 2022**

- Refactored JavaScript application components for maintainability, usability and consistency across frontend workflows.
- Shipped UI improvements and fixes with an Agile team through iterative product delivery.

Co-Founder & Design Lead | Webfruit **2021 – 2022**

- Took client websites from brief to launch on Webflow and WordPress as design lead of a web studio co-founded at college with a team of designers and developers.
- Kept clients informed and sign-off painless with a portal where each customer followed the progress of their own build and left feedback in one place.
- Kept the studio's projects on schedule and on budget by scoping the work, pricing it and delivering to the agreed dates.

EDUCATION

Bachelor of Science in Computer Science, Towson University **2022**
